

SIBERIAN ROE DEER

FASCINATION „HUNTING IN RUSSIA/KURGAN“

Trophy heads are better here than elsewhere.

Here, you hunt either until the rut from August 25 until September 10 or later in October. Depending on the forest, meadows or fields element of the hunting ground, the preferred hunting methods vary. In most hunting grounds, the advantages meanwhile of stalking or sitting game hunting have been recognized.

Each guest hunter returns home with an average of 2 to 3 good bucks. Year on year, the hunting here is unchanged.

The trophy head weight in Kurgan is around 1.5 pounds to just over 2 pounds. Annually, many bucks are also-hunted down with a much heavier set of antlers - In exceptional cases up to 3 pounds.
